

Employee Laptop Request Management System

Project Documentation

1. Business Objective

The primary business objective of this project is to implement a centralized, controlled, and standardized system for managing employee laptop requests within an IT organization.

The solution provides a single platform through which employees can submit laptop requests while allowing IT and management teams to track, validate, and approve requests efficiently.

The system replaces manual processes such as emails, verbal requests, and unstructured communication with a standardized digital workflow.

2. Business Goals

The key business goals of the application are:

2.1 Centralized Laptop Request Management

Provide a single ServiceNow platform where employees can submit and track laptop requests.

2.2 Request Classification

Differentiate laptop requests based on the intended usage:

Basic – For personal or general office use.

Advanced – For software development or other technical work.

2.3 Duplicate Request Prevention

Prevent an employee from submitting more than one laptop request within the same calendar year.

2.4 Improved Visibility

Provide IT and management teams with visibility into:

Submitted requests

Requester information

Request type

Request status

Manager approval

Request justification

2.5 Approval Tracking and Accountability

Maintain clear approval status and associate requests with the appropriate manager to provide accountability throughout the request lifecycle.

3. Functional Scope

The functional scope defines the capabilities implemented as part of this project phase.

3.1 In-Scope Functionalities

The system supports the following functionalities:

Employee Laptop Request

Employees can submit a Laptop Request Form through the ServiceNow Service Catalog.

Request Information

Each request captures relevant employee and request-related information.

Request Type

Employees can select the type of laptop required:

Request Type Purpose

Basic	Personal or general office use
Advanced	Software development or technical work

Request Status

The system tracks the request through defined statuses:

Pending Approval

Approved

Rejected

Request Justification

The reason for requesting the laptop is captured to provide business justification.

Available reasons include:

Software Development

Personal Use

Other

Duplicate Prevention

The system enforces a policy of one laptop request per employee per calendar year.

4. Record Producer – User Request Interface

The objective of this component is to provide a simple and user-friendly interface for employees to submit laptop requests through the ServiceNow Service Portal.

The Laptop Request Record Producer acts as the front-end entry point for employees.

Key Functions

When an employee submits the Record Producer:

Request information is collected from the user.

The information is mapped to the Laptop Request Form table.

A new request record is created.

Backend validations are triggered.

Duplicate request validation is performed.

Security and role-based access are enforced.

The request is prepared for the approval process.

5. Laptop Request Form – Data Model

The Laptop Request Form table stores all information related to employee laptop requests.

Field Name	Field Type	Description
Number	Auto Number	Unique identifier for each request
Requester	Reference – User	Employee submitting the request
Employee Email	Email	Contact email of the requester
Request Date	Date/Time	Date and time when the request was submitted
Short Description	String	Brief summary of the request
Manager	Reference – User	Manager responsible for approval
Type of Request	Choice	Basic / Advanced
Status	Choice	Pending Approval / Approved / Rejected
Reason	Choice	Software Development / Personal Use / Other

6. Data Model Description

Number

An automatically generated unique number is assigned to each laptop request.

Example:

LAP0001001

This allows IT teams to easily identify and track individual requests.

Requester

A reference field pointing to the User (sys_user) table.

It identifies the employee submitting the laptop request.

Employee Email

Stores the requester's contact email address.

Request Date

Records the date and time when the request was submitted.

Short Description

Provides a brief summary of the laptop requirement.

Manager

A reference field pointing to the User table and identifying the manager responsible for approving the request.

Type of Request

A choice field containing:

Basic

Advanced

Status

A choice field used to track the request lifecycle:

Pending Approval

Approved

Rejected

Reason

Captures the purpose of the laptop request:

Software Development

Personal Use

Other

7. Implementation Roadmap

The following milestones were followed to implement the Employee Laptop Request Management System.

Milestone 1 – Update Set Creation & Project Initialization

Objective

Create the development foundation and ensure configuration changes are captured.

Steps

Created a new Update Set named:

HR Onboarding Application

Set the Update Set to In Progress.

Made the Update Set Current before beginning development.

Verified that application configuration changes were being captured.

Outcome

The development changes are organized within a dedicated Update Set, supporting controlled configuration management and deployment.

8. Milestone 2 – Custom Application Creation

Objective

Create a dedicated application for the Laptop Request Management System.

Steps

Opened ServiceNow Studio.

Created a new custom application.

Application name:

Project Application

Configured the application as a Scoped Application.

Ensured application artifacts were created within the appropriate application scope.

Outcome

A dedicated application environment was established for developing the Laptop Request functionality.

9. Milestone 3 – Table Design & Data Model Configuration

Objective

Create the data structure required to store laptop request information.

Steps

Created the custom table:

Laptop Request Form

Configured the required fields.

Created an auto-number field for request identification.

Created Reference fields linked to the User table.

Created Choice fields for:

Request Type

Status

Reason

Configured appropriate field types.

Verified field values and data consistency.

Outcome

The Laptop Request Form table provides the required data structure for storing and managing employee requests.

10. Milestone 4 – Request Logic & Business Rules Setup

Objective

Implement backend validation and enforce organizational policies.

Steps

Created the Laptop Request BR Business Rule.

Configured the rule to execute before record insertion.

Checked whether the requester already has a laptop request during the current calendar year.

Prevented duplicate requests.

Added an error message when a duplicate request is detected.

Configured required validations and default values.

Outcome

The application automatically enforces the one-request-per-year policy at the backend level.

11. Milestone 5 – Validation, Testing & Automation Readiness

Objective

Validate the implemented functionality and prepare the application for further automation.

Steps

Performed end-to-end testing of laptop request creation.

Tested Record Producer field behavior.

Verified Choice field values.

Tested duplicate request validation.

Verified the request data was inserted correctly into the Laptop Request Form table.

Verified role-based access and ACL configurations.

Confirmed Update Set captures the required configurations.

Prepared the application for approval and workflow automation.

Future Enhancements

The application can be extended with:

Approval workflows

Flow Designer automation

Email notifications

Approval notifications

Request dashboards

Reporting

SLA management

Automated status updates

12. End-to-End Functional Flow

EMPLOYEE

SERVICE PORTAL

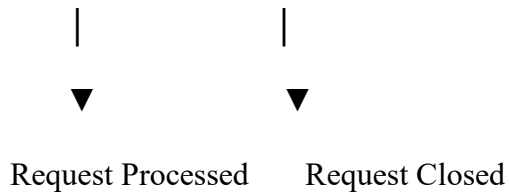

|

EMPLOYEE SERVICE CATALOG

|

13. Project Deliverables

The major deliverables of the project include:

HR Onboarding Application Update Set

Project Application

Laptop Request Form Table

Laptop Request Record Producer

Employee Service Catalog

Approval Relationship

Laptop Request Business Rule

IT Manager Role

IT Employee Role

IT Managers Group

IT Employees Group

Manager and Employee ACLs

Flow Designer Approval Process

End-to-End Testing

14. Overall Project Outcome

The Employee Laptop Request Management System establishes a centralized and controlled digital process for handling laptop requests.

The solution brings together:
